Chemical Water Test Kits

Titrimetric Water Analysis

eliminates the problems of interference inherent with electronic
colourimetric analysis

**Accurate
Reliable
Simple**

water analysis for industry & the professional

In order to conduct the water analysis, you require the Titrimetric
equipment and the Reagents. These items may be purchased separately,
or you may decided to purchase a complete industry specific Lab Kit.

[Equipment](#)
[Reagents](#)
[Lab kits](#)

This equipment is used for general
water analysis, ideal for use in the
field to give a close indication of the
chemical parameter concentration .

Our water analysis system is
titrimetric, this the most accurate
means of water analysis because
you do not have interference for
turbid samples of imperfections in
the glass cuvettes used in
colourimetric analysis

Dryden Aqua Pool Check for the private swimming pool

This is a simple and accurate yet low cost water test kit for private
swimming pools. The kit comprise of 20 tests for free chlorine by
DPD1, combined chlorine by DPD3 and pH. Spare bubble pack
tablet reagents are available for the test kit.
